

1982a Hodge cycles on abelian varieties (TeXed version)

(Available at www.jmilne.org/math/.)

Erratum

The second paragraph in 3.2(a) should read (as in the original): However, the above argument shows the following: let H' be the group fixing all tensors occurring in subquotients of $T^{m,n}$ s that are fixed by H ; then $H = H'$.

p26, bottom. As Junecue Sue pointed out to me, \mathbb{G}_m should act on $\mathbb{Q}(1)$ as ν not ν^{-1} .
